                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a sequence of the
glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in mutritional or pharmaceutical compositions intended for improving the condition of the gastrointestinal tract. The present sequence represents a semicorporate as a semicorporated in mutritions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            bacterium on sucrose substrate, and having backbone consisting of alpha (1,3) - and alpha (1,6) -linked anhydroglucose units, useful as thickener.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 11; Page 29; 51pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Glucan; glucosyltransferase activity; thickener; prebiotic; bioactive agent; anti-corrosion agent; foodstuff; gastrointestinal tract.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             glucansucrase gene
                                                                                                                                                     The present invention relates to glucan capable of being produced by glucosyltransferase activity of a lactic acid bacterium on a sucrose substrate. The method is useful as a thickener, as a prebiotic and as a bioactive agent and as an anti-corrosion agent. The glucan can be incorporated in foodstuffs such as beverages, sauces, dressings, dairy products. The glucan is useful as anticorrosion agent, e.g. for the protection of ship hulls. It can also be incorporated in nutritional or pharmaceutical compositions intended for improving the condition of the glastrointestinal tract. The present sequence represents a sequence of the

1,3-LINKED GLUCOSE AND SOME 1,6 LINKAGES), GTF-S (
WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI
FORMS OF GLUCANS.
SIMILARITY: Belongs to family 70 of glycosyl hydro
SIMILARITY: Contains 10 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      C. Natl. Acad. Sci. U.S.A. 99:14434-14439(2002).

FUNCTION: PRODUCTION OF EXTRACELULIAR GLUCANS, THAT ARE THE THOUSE IN THE EDVELOPMENT OF THE DENTAL PLAQUE OF THEIR ABILLITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE I AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS. CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = fructose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Microbiol.

Infect Immun. 58:2452-2458(1990).

-!- FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT

TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECAUSE
OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE
AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

-!- CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-

fructose + {(1,6)-alpha-D-glucosyl}(N+1).

-!- ENZYME REGULANION: GITE-S SYNTHESIS BY GTF-S IS INDEPENDENT OF
PRIMER GLUCAN UNLIKE GTF-I.

-!- MISCELLANSOUS: GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA

-!- MISCELLANSOUS: GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA).

T "Genetic analysis of the chromosome of alkaliphilic Bacillus that the chromosome of alkaliphilic Bacillus 1:27-233 (1999).
Extremophiles 3:227-233 (1999).
C --- CATALYTIC ACTIVITY: UDP-glucose + alpha-D-galactose 1-phosphate + UDP-galactose.
C --- PATHWAY: Galactose metabolism; second step.
C --- SUMCELLULAR LOCATION: Cytoplasmic (Potential).
C --- SIMILARITY: Belongs to the galactose-1-phosphate uridylyltransferase family 2.
                                                                                                                                                                                                                         HAMAP, MF 00571; -; 1.

Bacitracin synthetase 3 (BA3) [Includes: ATP-dependent isoleucine
adenylase (IleA) (Isoleucine activase); ATP-dependent D-phenylalanine
adenylase (D-Phenyl (D-phenylalanine); ATP-dependent histidine
adenylase (HisA) (Histidine activase); ATP-dependent D-aspartate
adenylase (D-RapA) (D-aspartate activase); ATP-dependent asparagine
adenylase (D-RapA) (D-aspartate activase); ATP-dependent asparagine

SUBUNIT: LARGE MULTIENZYME COMPLEX OF BA1, BA2 AND BA3.

DOMAIN: CONSISTS OF FIVE MODULES WITH TWO EPIMERIZATION DOWAINS IN THE SECOND AND FOURTH MODULES, AND A PUTATIVE C-TERMINAL THIOESTERASE DOMAIN. EACH MODULE INCORPORATES ONE AMINO ACID INTO THE PEPTIDE PRODUCT AND CAN BE FURTHER SUBDIVIDED INTO DOMAINS RESPONSIBLE FOR SUBSITIATE ADENYLATION, THIOLATION, CONDENSATION (NOT FOR THE INITIATION MODULE), AND EPIMERIZATION (OPTIONAL), AND

UvrC both incises the 5' and 3' silof the lesion. The N-terminal half is responsible for the 3' incision and the C-terminal half is responsible for the 5' incision (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SUBUNIT: Interacts with uvrB in an incision complex

CONDITION CHARACTERIZED BY LOSS OF PIGMENTATION; REDUCED EYE SIZE; FAILURE OF SECONDARY BONE RESORPTION; REDUCED MUMBERS OF MAST CELLS; RARLY ONSET OF DEARWASS, AND WHICH GIVES RISE TO A NUMBER OF DIFFERENT PHENOTYPES. ANONG THEM, MICROPHTHALMIA-FYELESS WHITE (MI-EW) HAS A NORMAL APPEARANCE AT THE HETEROZYGOUS STATE, BUT SHOWS WHITE COAT; EYES ALMOST ABSENT AND EYELDS NEVER OPEN AT HOMOZYGOSITY MICROPHTHALMIA-BLACK AND WHITE SPOT (MI-BWS) IS NORWAL AT HETEROZYGOSITY, AND PRESENTS WHITE SPOT (MI-BWS) IS NORWAL AT HETEROZYGOSITY, AND PRESENTS WHITE SPOTS AND BLACK EYES AT HOMOZYGOUS STATE. MICROPHTHALMIA-BLACK AND WHITE SPOTS AND BLACK EYES AT HOMOZYGOSITY, AND PRESENTS WHITE SPOTS AND BLACK EYES AND HOMOZYGOSITY, AND DERMIS SPOTS ON TOES, TAIL AND BLACK EYES AND HOMOZYGOSITY, AND DERMIS SMALLER THAN NORMAL, AND INNER EAR DEFECTS AT HETEROZYGOSITY, AND DERMIS SMALLER THAN NORMAL, HENOTYPE AT HETEROZYGOSITY, BUT SHOWS GRADUAL DEPIGMENTATION OF COAT, SKIN AND EYES; AND RETINAL DEGENERATION AT HOMOZYGOSITY.

MICROPHTHALMIA-SPOTTED (MI-SP) SHOWS NORMAL PHENOTYPE; AT HOMOZYGOSITY, HOWEVER, TYROSINASE ACTIVITY IN SKIN IS REDUCED. MICROPHTHALMIA-SPOTTED (MI-SP) SHOWS NORMAL PHENOTYPE; AT MICROPHTHALMIA-SPOTTED (MI-SP) SHOWS WHITE COAT; EYES OF REDUCED SIZED AND POSSIBLE MILD OSTEOPOROSIS AT HOMOZYGOSITY.

MICROPHTHALMIA-SPOTTED (MI-SP) SHOWS WHITE COAT; EYES OF REDUCED SIZE AND UNDIGNEMINED AS POSSIBLE MILD OSTEOPOROSIS AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT HOMOZYGOSITY. MICROPHTHALMIA-BLACK AT 
SIMILARITY: Contains 1 basic helix-loop-helix (bHLH) domain.
